About this publication

We are committed to encouraging enquiry and debate among academics,, practitioners.and.policy.makers.in.all.aspects.of.financial.capability..To.help. this.we.commission.research.and.publish.papers.on.financial.capability., extending.across.psychology,,sociology,,economics.and.other.disciplines..

Our research papers are intended to stimulate interest,,to.challenge.and. to.develop.thinking..They.may.sometimes.contain.controversial.ideas.that. reflect.the.authors'.views.and.not.necessarily.those.of.the.UK.Consumer. Financial.Education.Body.(CFEB).

The purpose of this document is to summarise the key findings and. proposals.of.the.behavioural.science.research.report,,*Transforming Financial Behaviour: developing interventions that build financial capability.*..CFEB. commissioned.the.report.to.identify.the.most.effective.drivers.for.changing. financial.behaviour.and.consider.ways.in.which.these.could.be.harnessed.to. improve.financial.capability..

It will be of interest to:

- .those.who.design,,market.and.buy.financial.products;
- .independent.financial.advisers,,money.advisers.and.debt.counsellors;
- .policy.makers.working.on.personal.finance,,wellbeing.and.financial. capability;;and
- .those.who.design.and.deliver.financial.capability.initiatives.

Foreword

Right now, across the globe, economies are experiencing the effects of financial shock. Personal financial capability has a role in preventing the conditions that create shocks and in equipping us to cope with them when they happen..

Financially capable citizens are crucial to a country's long-term economic health. A population that keeps track of its money, makes ends meet, and plans ahead creates a strong foundation for economic growth. And consumers who choose financial products well and stay informed about financial matters encourage healthy financial services markets. On a personal level the ability to manage our own financial affairs brings us freedom, increases our life choices and contributes to our psychological wellbeing. By building our own financial resilience, we contribute to that of our families, communities and society as a whole.

Through the Delivering Change programme, nine million people have received financial information and advice in the last four years. We have just published the final evaluation of our Money Guidance Pathfinder¹. It shows that three quarters of users find Money Guidance so useful they would recommend it to their friends, and that 20% take positive action after using the service. Our challenge now is to encourage even more people to act and to change their long-term financial behaviour. I believe that the annual family financial health check the Government has asked us to develop, which will build on our established Moneymadeclear service, provides an outstanding opportunity to do this.

This is why I am excited by the findings of the report, *Transforming Financial Behaviour*². It shows we can use learning from psychology and sociology alongside more traditional policy interventions to foster behaviour change. Through applying and evaluating well-researched interventions we want to build on our expertise. I hope that together with our partners from government, the financial services industry, the third sector and consumer groups we can find practical ways to create an environment that supports enduring financial capability..

I encourage you to read the full report. I would welcome your reflections on it and your collaboration, as we take forward this ground-breaking work.

Tony Hobman

July 2010

Background

Choices matter

In a world in which individuals are increasingly required to take personal responsibility for their financial affairs, people need to be able to manage their money well. The cost of not having the necessary skills to make sound financial decisions is significant for individuals, but also for society as a whole..

- When people make bad decisions, or no decisions, there are often negative consequences for society generally. So an individual's inadequate provision for retirement creates a burden for the state.
- The absence of financial capability can divert economic resources from more productive uses. Where individuals become over-indebted, many parties incur costs in trying to resolve the situation.
- Poor financial capability makes financial services more expensive for everyone. Firms have to spend more time educating consumers and developing systems to mitigate risks. The costs of this are passed on to all consumers.

Furthermore, our recent research on the relationship between people's ability to manage their money and wellbeing³ demonstrates that poor financial capability can contribute to ill health, creating a further layer of personal and social costs. However, just as in the case of health, financial choices are complex and we find it difficult to engage with them. This can lead to inertia and increasing information asymmetry for consumers..

The role of CFEB

In the Financial Services Act 2010, Parliament gave the Consumer Financial Education Body (CFEB) the statutory responsibility to enhance:

- the understanding and knowledge of members of the public on financial matters (including the UK financial system); and
- the ability of members of the public to manage their own financial affairs.

CFEB has taken over the leadership of the National Strategy for Financial Capability from the Financial Services Authority (FSA) in partnership with government, industry and the third sector..

Working with the financial services industry and other partners, we provide financial information, education and advice to people, including at key stages in their lives. This is done through www.moneymadeclear.org.uk, face-to-face and over the phone, workplace seminars, training key frontline workers and a comprehensive range of printed guides. We also work in partnership with trusted intermediaries like youth workers, midwives and student money advisers to reach key target groups. Rigorous evaluation of our work.

www.cfebuk.org.uk/pdfs/Trans_fin_behav_reportJuly2010.pdf.It.contains.an.academic.literature.review.,.case.studies.and.expert.interviews.relating.to.behavioural.economics..Its.key.findings.and.recommendations.are.set.out.in.this.summary.document.

The report: Key findings and recommendations

1. Literature review: behaviour change in finance

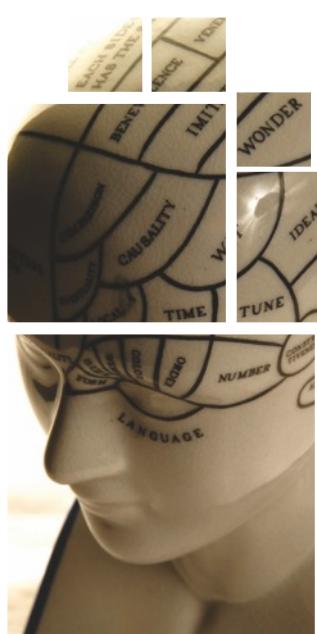

What is behavioural economics?

Behavioural economics seeks to apply the lessons from psychology to the laws of economics. The ground-breaking work of the psychologist and Nobel Laureate Daniel Kahneman and his colleague Amos Tversky demonstrated that the classic economic laws of rationality do not lie at the heart of human decision making⁵.

Our behaviour is not guided by a kind of super-computer that can analyse the cost and benefits of every action and determine maximum wellbeing.. Instead, it is led by our adaptable, sociable, emotional, instinctive brain which uses mental heuristics – ‘rules of thumb’ – to deal with the myriad choices we face.. Generally, these serve us very well,, but they can sometimes lead to misperceptions and misjudgements.. So the mental shortcuts that enable us to cope with a complex world can sometimes get us into trouble, both as individuals and collectively.

The report’s authors explain that psychologists are converging on the view that two processes operate in the brain.. One is reflective (controlled, effortful, deductive, slow and self-aware), and the other is automatic (uncontrolled, effortless, emotional, fast and unconscious).

In real life, the distinction is not so clear-cut: a dynamic mix of both reflective and automatic processes generally governs our behaviour.. When driving a car, for example, we can focus on the radio and apparently drive on autopilot.. Our reflective system is ignoring everything but the radio, but our automatic system is not because if we hear the sound of a horn we break off from listening to the radio and focus all our attention to the situation on the road.

Changing behaviour

Two general models for population-wide behaviour change have emerged in recent years::

- interventions that aim to change behaviour by providing information, education and tangible incentives; and
- interventions that change behaviour by changing the environment within which the person acts..

Traditional public policy interventions tend to use the first model. It is presumed that consumers will consciously analyse the information and incentives available to them and act in ways that reflect their best interests..

In contrast, the second model relies on environmental changes to alter behaviour. It focuses on the sub-conscious, ‘fast and frugal’ processes that psychologists generally agree can influence our judgments and decision-making almost unknowingly. This model recognises that what appear at first glance to be irrational or inconsistent choices may be the result of evolved responses to environmental and social influences..

what appear at first glance to be irrational or inconsistent choices may be the result of evolved responses

Lessons for policy makers

Policy-makers attempting to change behaviour need to understand how the reflective and automatic systems work, and how they affect behaviour. The report suggests that the most effective policies will be those that combine more traditional interventions: regulation, information and education, with the creation of contexts and environments that encourage the automatic system to support behaviour change.

The literature review focuses on research relevant to financial behaviour. It looks firstly at research into changing behaviour by influencing the reflective process through providing information, education and advice and trying to change beliefs. Evidence suggests that interference from the automatic process can hamper or help these interventions. In particular, reflective interventions appear to be more effective when individuals actively seek them. The main focus of the report, however, is on the automatic process and how this drives behaviour...

Developing a framework

Recent research undertaken for the UK Government’s Cabinet Office on influencing behaviour through public policy sets out what appears to be the most robust effects operating largely (but not exclusively) on the automatic system.⁶ It proposes each effect be seen as an element of a framework – called MINDSPACE – for checking that policy interventions take automatic processes into account.

Transforming Financial Behaviour’s authors have used MINDSPACE as a framework for reviewing literature that directly implicates improving financial capability. They draw on research into financial, health, and risk management behaviour. In the light of the literature review, the authors conclude that all the MINDSPACE elements are relevant for encouraging financially capable behaviour.

MINDSPACE elements

Messenger		We are heavily influenced by who communicates information.
Incentives..		Our responses to incentives are shaped by predictable mental shortcuts such as strongly avoiding losses..
Norms.		We are strongly influenced by what others do.
Defaults.		We 'go with the flow' of pre-set options.
Salience.		Our attention is drawn to what is novel and seems relevant to us.
Priming.		Our actions are often influenced by sub-conscious cues.
Affect.		Our emotional associations can powerfully shape our actions.
Commitments.		We seek to be consistent with our public promises, and reciprocate acts.
Ego.		We act in ways that make us feel better about ourselves.

2. Suggested interventions

Financial Capability in the UK: Delivering Change⁷.identified.five.key.components.of.financial.capability:.making.ends.meet;.keeping.track.of.your.finances; .planning.ahead; .choosing.financial.products; and.staying.informed.about.financial.matters..

The.research.team.sought.to.identify.practical.interventions.that.may.be.particularly.effective.in.relation.to.improving.financial.capability..A.long.list.of.possible.interventions.was.developed..Through.discussions.and.debate.amongst.the.team.the.list.was.refined.to.ten.to.explore.further.in.expert.interviews.and.case.study.reviews..Interviews.were.conducted.with.21.experts.from.four.groups:.financial.advisors,,providers,,consumer.help.organisations.and.CFEB/FSA..

10 Financial.health.checks.that.challenge.negative.self-beliefs.and.norms.	Ego

6699

Encouraging the allocation of money to a 'rainy day' mental account may safeguard that money to be used for emergencies only.

Intervention 1: Use the best person or channel to provide education/information

Research suggests that sometimes the perceived expertise of the person delivering the message is more important than communication skill.. The perception of expertise may be linked with trust.. Evidence suggests that people in lower socio-economic groups are more sensitive to the messenger being someone like them.(in.age,,gender,,ethnicity,,social.class/status,,culture,,profession,,etc.). 'Word.of.mouth'.messages.seem.to.be.particularly effective.for.young.people.and.those.with.financial.difficulties..It.may.be. possible.to.encourage.this.effect.,by.interventions.relating.to.social.norms.

Interviewees said that trust and rapport are crucial.

'If you are being provided with information from an individual/ organisation that you trust, you've overcome many of the barriers already.' *FSA/CFEB*

Intervention 2: Provide incentives to change behaviour

Even small incentives can make a big difference.. Since the cost to individuals and society of poor financial management is high there may be an economic case for using incentives to encourage improved money management.. However, the expert interviews and the case studies suggest that incentives should be approached with caution.. There was considerable concern about the use of negative incentives, such as high penalty charges..

Interviewees had mixed feelings about incentives.

'We offer incentives to switch current account and it does work...but I'm sceptical about using incentives to change long term behaviour.' *Provider*

'Most people I know of that put money into pensions would not do so unless there was tax relief – they would use savings.' *Adviser*

Intervention 3: Use 'mental accounting' to encourage provision for unexpected outcomes

We appear to allocate money to mental accounts and then resist transfers between them.. Encouraging the allocation of money to a 'rainy day' mental account may safeguard that money to be used for emergencies only.. Identifying the best level of saving for a rainy day is a similar challenge to identifying the right level of insurance.. Research shows that the amount of insurance a person considers necessary is influenced by framing and priming..

Interviewees' experience is that it is particularly difficult to persuade people to save for the unexpected..

'You are asking them to become receptive about something that hasn't happened. They become receptive when it has.' FSA/CFEB

'Young people are pretty short-term, and if they are doing any future planning it's about securing a better job.' *Consumer help*

Interventions.that.combine.mental.accounting.with.commitment.,priming.and.effect.may.work.best.

Intervention 4: Provide information on relevant peer groups

Social.norms.have.a.significant.effect.on.behaviour.and.interventions.that.harness.them.have.been.successful.in.a.number.of.areas..Most.are.based.on.communicating.what.other.people.like.you.do.in.a.given.situation..The.literature.review,.interviews.and.case.studies.suggest.that.consumers.may.have.little.sense.of.financial.capability.norms..Identifying.and.communicating.positive.norms.may.be.very.effective..

This.suggested.intervention.was.well.supported.by.interviewees,,although.failure.to.keep.up.with.presented.norms.might.be.demotivating..

'If you are on the margins, you can look at people who have managed to save for something.' *Consumer help*

'If you present an option that people interpret as a norm, they will go for it and think that it's rational.' FSA/CFEB

'You could compare your goal to people who have the same goal...and view your performance relative to the best and worst performer and that would help you keep on track.' *Provider*

Intervention 5: Use a default to encourage action

Harnessing.inertia.can.be.an.effective.strategy..Considerable.impacts.have.resulted.from.changing.defaults.on.retirement.saving.and.benefit.entitlements..There.may.be.scope.to.use.defaults.in.other.ways..For.example,.a.default.that.provides.balance.information.automatically.after.every.account.transaction.might.encourage.people.to.keep.track..A.default.to.setup.a.regular.deposit.transfer.when.opening.a.savings.account.will.make.regular.savings.more.likely..

Interviewees.see.these.as.useful.for.those.who.otherwise.would.not.act.

'Compulsion is the next step down the line, but defaults are helpful to establish regularity in people's lives' *Adviser*

Default.financial.health.checks.were.seen.as.very.positive.

Social norms have a significant effect on behaviour and interventions that harness them have been successful in a number of areas.

6699

Our attention is drawn to what is novel and seems relevant to us, and we have limited attention spans.

'The relationship...revolves around a financial health check, and if you can maintain a relationship with a consumer and get them coming back, it's an incredibly helpful thing for both sides.' *Provider*

Intervention 6: Provide salient feedback to support money management

Our.attention.is.drawn.to.what.is.novel.and.seems.relevant.to.us.,and.we.have.limited.attention.spans..Making.relevant.information.salient.is.desirable.,because.we.are.unlikely.to.search.for.it.,and.that.could.lead.to.inaction.or.poor.choices..

'Often consumers do not know what they spend their money on...they underestimate what they spend...trigger figures can help the consumer be realistic...enabling them to realise that they spend £150 on petrol rather than £50.' *Provider*

Feedback.mechanisms.that.tell.customers.how.they.are.doing.financially.may.support.behaviour.change..For.example.,getting.feedback.that.tells.you.whether.or.not.you.are.on.target.,when.saving.for.a.particular.goal...

Information.might.be.made.more.salient.by.presenting.it.differently..For.example.,sums.of.money.expressed.in.terms.of.the.number.of.working.hours.they.represent.,or.debt.repayments.showing.the.amount.of.debt.costs.saved.

Interviewees.reported.that.feedback.has.the.most.impact.when.it.is.specifically.targeted..Frequency.and.simplicity.are.important.factors.

'You present a particular issue, and then deal with that.' *Consumer help*

'If my credit card bill hits £100 text me...a trigger so you don't spend any more...it enables you to make an informed decision.' *Adviser*

Feedback.would.be.useful.for.long-term.savings.plans..If.people.can.see.their.money.is.doing.something.in.relation.to.their.overall.objectives.,then.they.will.feel.more.positive.about.'locking.away'.a.certain.proportion.of.their.discretionary.income.

'Brilliant, all of a sudden, all of that money that goes out of my account at the start of every month that I don't get to spend is doing something.' *Adviser*

Intervention 7: Present information that evokes particular responses

Tests.show.that.responses.change.if.people.are.first.exposed.to.priming.stimuli.such.as.words.,sight.,or.sensations..We.know.priming.influences.immediate.behaviour.,but.not.whether.it.has.a.longer-term.effect..Emotional.

effect.is.a.powerful.force.in.decision-making..It.is.rapid.and.we.can.experience.an.emotional.reaction.before.knowing.what.we.are.reactng.to..

One.technique.used.is.encouraging.people.to.visualise.their.future..This.could.be.in.a.negative.as.well.as.positive.way;;for.example.asking.someone.to.imagine.what.their.spouse's.life.might.be.like.if.they.were.to.die.suddenly..Another.is.to.share.case.studies.about.people.who.have.saved.successfully.as.a.way.of.inspiring.others.

Involving.consumers.in.designing.the.way.information.is.delivered.(co-production).could.prevent.priming.and.affect.being.misused.

'Having people determine the way messages should be presented... they have a huge contribution to how we understand what they want to hear.' *Provider*

Emotional effect is a powerful force in decision-making.

Intervention 8: Make a commitment to an action or behaviour

People.can.feel.overwhelmed.by.having.to.take.decisions.that.will.shape.the.remaining.of.their.lives..This.leads.many.to.put.decisions.off.until.too.late.

'If you're trying to plan for people you want to see them much earlier in life than [when they are approaching retirement]...often we're seeing people and we can make sense of their money but we have no great ability to shape things.' *Adviser*

We.seek.to.be.consistent.with.our.public.promises.,and.to.reciprocate.acts..Many.people.are.aware.of.their.will-power.weaknesses.(overspending,,overeating.or.drinking).and.use.commitment.devices.to.achieve.long-term.goals..Commitments.can.alter.behaviour.and.overcome.procrastination,.and.they.appear.to.be.more.effective.as.the.costs.of.failure.increase..

Commitments.could.also.be.used.in.relation.to.financial.capability,.such.as.committing.to.regularly.check.statements.or.have.a.financial.check.up..Commitments.have.been.shown.to.be.more.effective.if.they.involve.a.public.statement.and/or.have.sanctions.attached..The.choice.of.individual.or.network.to.which.a.commitment.is.made.may.also.influence.its.effectiveness.

'Having someone talk to me about whether I've actually followed it through, and supports me to follow it through.' *Consumer help*

Intervention 9: Set realistic targets and goals

The.goal-based.savings.products.in.the.case.studies.show.that.realistic.goals.seem.to.have.a.positive.impact.on.saving..Whether.it.is.through.binding.behaviour.or.creating.structure.for.individuals,.realistic.target.setting.may.have.significant.results.for.creating.financially.capable.habits.

6699

Financial health checks could be designed to counter beliefs and norms that have a negative effect on financial capability.

Interviewees saw encouraging commitment and setting realistic goals as inextricably linked with small steps and budget planning as key strategies.. Breaking goals down into stages lessens the intangibility of the future. objective and makes it more accessible.. For example,, asking young people to think just five years into the future and then putting in place steps to achieve their short-term goals..

'It's all about small steps, moving in the right direction and changing behaviour in a way that is evolution rather than revolution.' *Consumer help*

'If you told a young person that they could save £144 a year, they may think it's impossible, but if you translate this to cutting out one or two cans of fizzy drink a day, it becomes more achievable.' *FSA/CFEB*

Intervention 10: Financial health checks that challenge negative self-beliefs and norms

Self-beliefs seem to be self-fulfilling.. For example,, individuals with a low literacy identity often believe they are less financially capable than they really are.. In addition,, the desire for self-consistency can lead us to choose products,, and make assumptions about norms.(e.g..a 'cool'.person.holds. many.credit.cards.and.does.not.save).that.are.not.necessarily.in.our. interests.

Financial.health.checks.could.be.designed.to.counter.beliefs.and.norms.that. have.a.negative.effect.on.financial.capability..Improving.financial.capability. should.lead.to.changing.self-beliefs.and.a.greater.confidence.to.engage.with. financial.decisions..

Interviewees strongly supported the use of financial health checks in general.. Several experts mentioned the importance of reviews to take account of. transitions.and.life.events.and.ensure.that.goals.remain.appropriate.and. achievable..

'We need to find more engaging ways of doing this...people who you want to give a review to do not come into our branches.' *Provider*

3. Case studies from the financial services sector

The report examines a number of financial products that apply learning from behavioural research, and are focused on three key elements of financially capable behaviour. Each product was analysed using a methodology based on the MINDSPACE framework and each was found to be using several behavioural strategies simultaneously.

the pots create a negative incentive that discourages using the money for other purposes

'Making ends meet' products

These are accounts designed for those who have been in, or are approaching, serious financial difficulty. The Secure Trust Bank 'Prepaid Current Account' and RBS/NatWest 'Money Manager' proposition divide the customer's expenditure into separate 'pots' for bills and discretionary spending. There is a default in that the customer is assisted through the set up process to manage their money in this way. Once set up, the pots create a negative incentive that discourages using the money for other purposes. The customer makes a commitment to allocate an amount for paying regular bills and this includes an amount to enable debt repayment to take place. The combination of interventions appears to improve customers' ability to make ends meet.

Over a six month period, customers using the Money Manager proposition reduced their overdrafts, on average, by almost half and increased their savings from zero to around 15% of what their overdraft had been at the outset. Early evidence from Secure Trust Bank shows take up from socio-economic groups A, B and C as well as D and E.

'Keeping track' products

An O2 product, 'Load & Go', and Barclaycard's 'mybarclaycard' both use innovative ways of providing relevant feedback (salience) to help customers keep track. Load & Go sends an instant text message when a purchase is made. The customer knows immediately how much is left on the card and can access the information at any time. Mybarclaycard lets customers search and display transactions by retailer, commodity and over time. They can focus on just one expenditure category or a combination. However, simply providing information may not be sufficient to change behaviour; further insights are likely once data has been analysed on customer behaviour.

A consistent message used in marketing Load & Go is 'never overspend'. This may act as a form of priming that encourages people to take control of their finances rather than just seeing the card as a method of spending..

Feedback from O2 suggests that customers are using the product as a

tool.to.control.spending..Money.is.loaded.onto.the.card.and.is.spent.over.a.period.of.time..Most.customers.have.a.clear.goal.(commitment).not.to.spend.more.than.the.amount.loaded.onto.the.card.either.over.a.period.of.time.or.on.a.certain.type.of.expenditure..One.group.of.customers.is.permitted.to.have.a.weekly.or.monthly.load.from.a.current.account..This.regular.commitment.is.popular.and.normally.started.shortly.after.the.account.has.been.set.up..The.large.take-up.of.customers.using.the.card.in.this.way.may.indicate.that.demand.for.control-type.tools.exists..

'Planning ahead' products

The.report.considers.two.goal-based.savings.products.,‘Goal.Saver’.provided.by.Saffron.Building.Society.and.‘Your.Saving.Goals’.from.RBS/NatWest..Both.providers.report.higher.than.average.levels.of.saving.through.these.accounts..

Both.accounts.require.customers.to.set.a.goal.and.make.a.commitment.to.regular.saving..The.goal.is.reinforced.by.attaching.a.name.or.a.picture.to.the.account.,which.may.harness.emotional.affect..Opening.the.account.for.a.specific.purpose.creates.an.incentive.not.to.use.the.money.for.other.things..As.people.tend.to.discount.the.future.and.so.undervalue.the.benefits.of.saving,,this.kind.of.incentive.appears.to.be.helpful.to.them..

Account.opening.is.designed.as.a.smooth.process.that.leads.from.setting.a.goal.to.setting.up.a.regular.payment..The.default.is.to.set.up.the.payment.when.opening.the.account.and.this.significantly.increases.the.number.of.customers.that.do.this..The.accounts.give.salient.feedback.on.progression.towards.the.goal.,and.suggest.corrective.action.if.saving.is.falling.behind..

Next steps

Many of CFEB's products and programmes already contain behavioural features that enhance their effectiveness, for example using trusted messengers like midwives, youth workers and employers to pass on information. In the light of this report we will evaluate other features we might add. Where we are developing new products we will seek to embed effective choice architecture at the design stage..

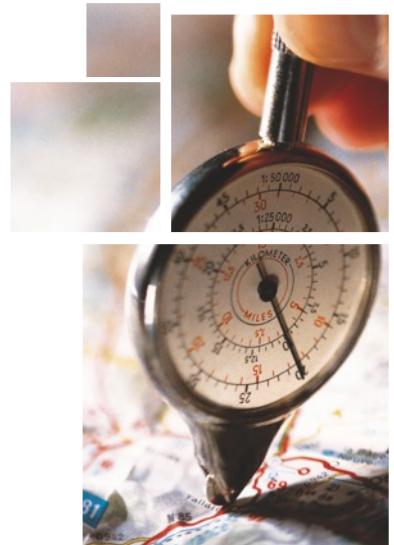

Through this summary document we are seeking your views on the interventions identified in the report, *Transforming Financial Behaviour*, and what further research and testing might be useful for us and for our partners in industry, government and the third sector. Our goal in this – as in all we do – is to work collaboratively and efficiently to build enduring financial capability and resilience in the UK population.

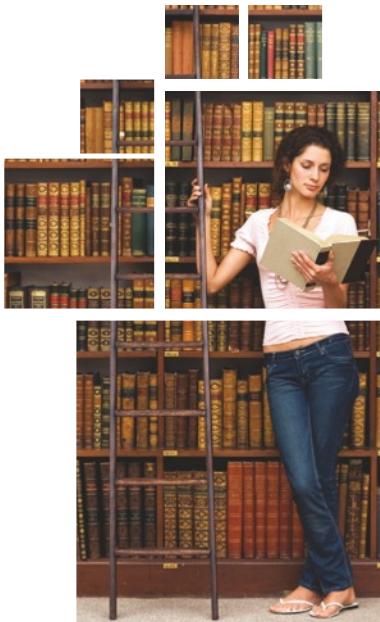

We would very much welcome your feedback on what you have read in this document and whether it chimes with your experience. In particular, we are interested in:

- What, if any, behavioural strategies do you use in your work, and what evidence do you have to support them?.
- What are the bridges and barriers to using this approach to transform financial behaviour?.
- How can CFEB collaborate with the financial services industry and other stakeholders to understand and harness behavioural strategies to improve financial capability?

You can submit your views in writing to sarah.smith@www.moneymadeclear.org.uk or to CFEB, 25 The North Colonnade, Canary Wharf, London E14 5HS. We would be grateful to receive your response by 30 September 2010.

For an electronic copy of this document or to find out more about CFEB's work, visit www.cfebuk.org.uk
